Location: Ho Chi Minh City

SUMMARY

Software Engineer with nearly 2 years of experience designing, building, and maintaining enterprise-grade applications across .NET, Node.js, and Python ecosystems.

- Proficient in designing scalable APIs, optimizing database performance, refactoring legacy modules, and improving system reliability.
- Experienced in domain areas including civil status management, e-commerce platforms, farm management systems, and learning management systems.
- Skilled in cloud deployment and containerization using AWS and Docker, with strong knowledge of PostgreSQL, SQL Server, and MongoDB.
- Capable of working with design documents, handling complex business logic, collaborating with QA teams, and delivering stable, high-quality features in production environments.

EDUCATION

University of Technology and Education HCMC (UTE)

Bachelor of Engineering in Information Technology; GPA: 3.2/4.0

Ho Chi Minh City, Vietnam

Oct 2020 – Dec 2024

TECHNICAL SKILLS

- **Programming Languages:** C#, JavaScript (Node.js), Python (Experience with: Java, PHP, Golang)
- **Frameworks / Platforms:** ASP.NET Core, Entity Framework (EF6), NestJS, FastAPI, Django, Flask
- **Databases:** PostgreSQL, SQL Server, MySQL, MongoDB (Experienced in query optimization & large dataset handling)
- **Cloud & DevOps:** Docker, AWS (EC2, S3, Lambda), Linux, CI/CD (basic)
- **Search / Caching / Scheduling:** Elasticsearch, Redis, ELK Stack, CronJob
- **Other:** API Design, System Design (fundamentals), Performance Optimization, GrapeCity Diodocs - Active Report, Prompt Engineering, Reading Japanese Specifications

SOFT SKILLS

- Strong analytical and problem-solving skills
- Clear communication & requirement clarification
- Collaboration with QA/Tester to resolve issues
- Ownership and responsibility in production systems
- Fast learning & adaptability across multiple tech stacks
- Time management and disciplined workflow

LANGUAGES

- **English:** Working proficiency – able to communicate effectively in work and technical discussions (equivalent TOEIC 750)
- **Japanese:** Working communication and technical document reading (JLPT N3 level)

WORK EXPERIENCE

- **FPT Software** Ho Chi Minh City
Jan 2025 – Present
Software Engineer
 - **Project:** 新コング (NEWKONG): Developing and maintaining civil status management modules (marriage, birth, death registration, household records,...).
 - **Tech stacks:** C#, .NET, VueJS, PostgreSQL, GrapeCity, Prompt Engineering
 - **Responsibilities & Achievements:**
 - * Implemented reusable common functions and optimized the Diodocs report system, reducing more than 50% of code and improving maintainability
 - * Designed and implemented reporting features to generate PDF/PNG outputs from database records and user inputs; optimized execution time and improved overall performance
 - * Conducted pilot testing and evaluated multiple libraries to propose the most suitable solution for the reporting feature, ensuring compatibility, performance, and maintainability
 - * Optimized performance for modules handling large datasets; resolved slow response issues and increased system throughput
 - * Analyzed system architecture and data flow; designed and optimized SQL queries for better data consistency and execution speed
 - * Developed and maintained APIs with robust validation logic; resolved issues related to data formatting and data transmission between modules
 - * Reviewed Japanese design documents (HLD/LLD), ensured accurate implementation, and raised clarification tickets for inconsistent or unclear requirements
 - * Collaborated with QA to reproduce bugs, identify root causes, and deliver timely fixes; participated in code reviews and regression testing to ensure high-quality releases
 - * Investigated and resolved defects in the tracking system; ensured stable and reliable system operation
 - * Translated business requirements into detailed implementation plans and contributed to system design and improvement discussions
- **EBIZWORLD SOLUTION** Ho Chi Minh City
Mar 2024 – Dec 2024
Software Engineer
 - **Project:** **Oxyl Farm Mate:** Building backend for a farm management platform.
 - **Role:** Backend Developer (NestJS)
 - **Technologies:** JavaScript, NestJS, MongoDB, PostgreSQL, Cronjob, Docker, AWS
 - **Project:** **Savile:** Developing backend for a high-end fashion & lifestyle e-commerce platform.
 - **Role:** Backend Developer (Node.js, Express)
 - **Technologies:** Python, FastAPI, MongoDB, MySQL, CronJob, Docker, AWS
 - **Project:** **Tanngo LMS:** Backend system for an online learning management platform.
 - **Role:** Backend Developer (Python)
 - **Technologies:** Python, FastAPI, MongoDB, PostgreSQL, AWS, Docker
 - **Responsibilities (across all EBIZWORLD projects):**
 - * Designed and implemented RESTful APIs and business logic across multiple backend stacks (NestJS, FastAPI)
 - * Developed core features including user management, class/assignment workflows, page management, and event scheduling
 - * Implemented cronjob-based real-time notifications and background processing tasks
 - * Integrated third-party services such as Astute Payroll for billing and payment operations
 - * Wrote and maintained unit tests; validated API correctness and ensured feature stability before release
 - * Deployed backend services using Docker and AWS, performed environment configuration and troubleshooting
 - * Diagnosed and resolved bugs across multiple projects; collaborated with QA to ensure smooth releases
- **FPT Software** Ho Chi Minh City
Jun 2023 – Sep 2023
.NET Developer Intern
 - **Tech:** C#, ASP.NET, Entity Framework (EF6), Identity Framework, SQL Server, Cloudinary
 - **Project:** Recruitment Web API
 - **Responsibilities:**
 - * Implemented authentication/authorization with Identity Framework
 - * Developed CRUD APIs using EF6 and SQL Server
 - * Integrated Cloudinary for media storage

- **Cloud & Infrastructure**

- Google Cloud Fundamentals: Core Infrastructure
- AWS Deployment & Docker-based Infrastructure

- **Software Engineering & Backend**

- .NET Full Stack Foundation – Board Infinity (2024)
- C# and .NET Essential – LinkedIn Learning
- Introduction to Software Engineering – IBM (2024)

- **LLMs & AI Applications Engineering**

- Developing AI Systems with the OpenAI API – DataCamp

- Developing LLM Applications with LangChain – DataCamp
- Prompt Engineering with the OpenAI API – DataCamp

- Vector Databases for Embeddings with Pinecone – DataCamp
- Working with Llama 3 – DataCamp

- **AI & Machine Learning**

- Introduction to Artificial Intelligence (AI) – IBM (2024)
- Machine Learning with Python – IBM (2024)
- Python for Data Science, AI & Development – IBM (2024)

PROFESSIONAL GOALS

- **Short-term (6–12 months)**

- Strengthen software engineering skills by working on complex, real-world enterprise systems
- Improve capabilities in system design, API architecture, performance optimization, and code maintainability
- Enhance cloud experience with AWS and improve deployment workflows using Docker, CI/CD, and automation tools
- Develop better communication and requirement clarification skills, especially when working with Japanese technical specifications
- Gain deeper experience in cross-stack environments (.NET, Node.js, Python) to increase flexibility across projects

- **Long-term (1–3 years)**

- Grow into a well-rounded Software Engineer capable of leading technical components, mentoring teammates, and owning core modules
- Contribute to architecture design, scalability planning, and long-term technical strategies for enterprise systems
- Become a key engineer in delivering reliable, secure, and maintainable production-grade software
- Expand expertise across cloud, distributed systems, and modern engineering practices to support larger, more complex developments
